Lexis Usage Guide

This guide explains how to adjust certain Windows & BIOS settings to get the best experience from Lexis products.

1. Disable Secure Boot

Secure boot must be disabled to use some of our products.
1   Restart your PC and enter the BIOS/UEFI (usually by pressing DEL, F2, F10, or ESC).
2   Navigate to **Boot**, **Security**, or **Authentication** settings.
3   Locate **Secure Boot** and set it to **Disabled**.
4   Save changes and exit the BIOS.

2. Disable Fast Boot

Fast boot can prevent drivers from loading correctly.
1   Open **Control Panel** → **Power Options**.
2   Click **Choose what the power buttons do**.
3   Click **Change settings that are currently unavailable**.
4   Uncheck **Turn on fast startup** and save changes.

3. Disable Antivirus / Windows Defender

Antivirus software may block or remove files required for proper operation.
1   Open **Windows Security**.
2   Go to **Virus & threat protection**.
3   Click **Manage settings** under Virus & threat protection settings.
4   Turn off **Real-time protection**.
If you use third-party antivirus software, disable it from its system tray icon or settings panel.

4. Disable Core Isolation (Memory Integrity)

Core Isolation uses virtualization-based security that may interfere with certain drivers.
1   Open **Windows Security**.
2   Select **Device security**.
3   Click **Core isolation details**.
4   Turn off **Memory integrity**.
5   Restart your computer.

Important BattlEye Information

BattlEye **must remain enabled for GTA**. Do not disable BattlEye when playing GTA, as it is required for proper operation and online functionality.

For other games, usually the anti cheat will stay enabled, however you can contact Lexis for more guidance.
